

## Number Translation Services: Static Call Routing

Static routing uses rules that are not dependent upon changing information, e.g. on the length of a queue. Our **effEctive**® Service Number Suite provides two products for Static Call Routing: [One-to-One Routing](#) and [Scheduled Routing](#). We have designed these products for small and medium-sized enterprises with few requirements for routing intelligence. With these applications, your customer can administer simple number translations in a clear, easy-to-use web interface.
