

## Number Translation Services: Scheduled Routing

The **effective**<sup>®</sup> Scheduled Routing is a web-based application that enables your customers to route inbound calls to different call destinations depending on geographical region, day of the week and time of day. Your customer can set up origin-dependent routing for up to five freely definable geographical regions and route inbound calls on a quota basis (%) to up to five different destinations, each with two overflow destinations and a terminating announcement. Your customer can upload and assign his own customized recorded announcements using the web interface.
